## Red Brass and Tin Bronze Alloys

Commercial Ref.	Denomination of materials and processes in accordance with standard			Approximate mechanical characteristics at 20°C (minimum values)					Properties	Applications
	Denomination	Material no.	Process	Elastic limit $R_{p0.2}$ N/mm <sup>2</sup>	Breaking load $R_{p0.2}$ N/mm <sup>2</sup>	Elongation A5 (%)	Hardness HB 10/1000	Elastic Modulus KN/mm <sup>2</sup>		
<b>B - 0</b> 2)	CuSn2ZnPb DIN 1705	2.1098.01	G GC GZ	90	210	18	60	90 to 95	Good machinability. Weldable with brass. Works well at moderate speed and load. Resistant to sea water and waste water. Working temperature up to 225°C.	Bushings and bearings at moderate speeds and loads. Low pressure valves and fittings.
<b>B - 5</b> 2)	CuSn5ZnPb DIN 1705	2.1096.01	G GC GZ	90	220	16	60	65 to 105	Good machinability. Weldable with brass, with soft solder; only conditionally strong. Works well at moderate load. Resistant to sea water.	Bushings and bearings at moderate speeds and loads. Low pressure valves and fittings.
<b>B - 7</b> 2) 3)	CuSn7ZnPb DIN 1705	2.1090.01 2.1090.04 2.1090.03	G GC GZ	120 120 130	240 270 270	15 16 13	65 70 75	98 to 115	Semi-hard material. Resistant to wear and tear and sea water.	Bearings, sliding plates up to peaks of 4,000 N/mm <sup>2</sup> . Appropriate for emergency sliding.
<b>B-Rg10</b> 2)	CuSn10Zn DIN 1705	2.1086.01	G GC GZ	130		15	75	75 to 110	Hard material. Good resistance to traction, wear and tear and sea water.	Sliding bearings and coupling parts subjected to moderate stresses.
<b>B - 10</b> 2)	CuSn10 DIN 1705	2.1050.01	G GC GZ	130	270	18	70	90 to 110	Hard material endowed with a high expansion percentage, resistant to corrosion and sea water.	Suitable for guide wheels and turbine blades.
<b>B - 12</b> 1), 2)	CuSn12 DIN 1705	2.1052.01 2.1052.04 2.1052.03	G GC GZ	140 140 150	260 280 280	12 8 5	80 90 95	90 to 110	Hard material with resistance to wear and tear, corrosion and sea water.	Spindle nuts, worm gears and cylinder liners.
